Spray-On Polyurethane Foam – high density chemically bonded roofing foam, proven to have the highest “R” value per inch, making it the most efficient insulation product on the market.

UC-540 High Performance Polymer Membrane – spray polyurea aluminum membrane that is applied over spray-on polyurethane foam to encapsulate and protect the roof.

High Performance Polymer Membrane

Spray Polyurethane Foam (SPF)

Existing Substrate

With the combination of these 2 products, professionally installed and properly maintained, you have a reliable roofing system.

- Sustainable, durable, and lightweight
- Seamless – eliminates leaks
- Self-flashing
- Reflective
- Energy efficient due to high “R” value
- Huge savings – energy costs are lowered & costly roof repairs are eliminated
- Minimized thermal reduction
